

makes the difference

INDUMED B.V.B.A

NRG

Competition and training line

20 to 25 mmHg gradual compression sock.

Gives more compression to the ankle, less to the calf and less to the thigh. Improves blood flow upward to the heart.

clevertex
smart weaves

The first layer: absorbs the sweat from the skin.

The second layer: evaporates the sweat from the first weaves.

NRG line is designed to be used DURING intense effort, in the competition and training line for keeping your power. Based on the GRADUAL compression effect which is more intense in the distal and decreases progressively, pushing the blood from

RECU

Recovery line

20 to 25 mmHg uniform compression sock.

Uniform compression is the one that provides the same pressure in the ankle, the knee and the thigh.

Recommended time of use from 90 to 120 minutes

RECU line should be used immediately AFTER intense effort to get back to 100%. Get a quick recovery after exercise and speeds the strength production. This compression system 'compresses' the muscle so as to eliminate accumulated toxins during exercise. Uniform compression approximates muscle and broken microfiber promoting their recovery. Reduces pain and speeds your recovery.

RLX

Relax line

15 to 20 mmHg gradual compression sock.

Recommended for sport travels. Suitable for every day use.

Prevents the tourist class syndrome

clevertex
smart weaves

The first layer: absorbs the sweat from the skin.

The second layer: evaporates the sweat from the first weaves.

RLX line is designed to be used AFTER the recovery sock. The RLX sock distributes gradual pressure acting under the same physiological rule as the competition line but lighter and thought for longer periods of use. Increases relaxation after practicing sport.

NRG ATHLETICS UNISEX

- Improve your mark.
- Increases muscle oxygenation.
- Decreases muscle fatigue.

NRG BASKETBALL UNISEX

- Improves athletic performance.
- Jump shock absorber.
- Reinforces the Achilles tendon.

NRG FOOTBALL UNISEX

- Improves athletic performance.
- Greater sensitivity.
- Perfect foot's suction.

NRG TIGH ATHLETICS

- Reduces muscle fatigue.
- Minimizes impacts on the Achilles tendon.
- Improves peak VO2 and lactatemia.

NRG TREKKING UNISEX

- Nordic walking.
- Maximum calf suction.
- Delays the fatigue appearance.

NRG SKI UNISEX

- Less fatigue.
- Thermal Comfort.
- Relieves the boot's pressure.
- Increases sensitivity.

NRG SNOWBOARD UNISEX

- Reduces fatigue.
- Thermal Comfort.
- Improves boot's touch.

NRG TIGH CYCLING

- Increases muscle oxygenation.
- More acid lactic tolerance.
- Maximum suction in the calf and thigh.

NRG PADDLE/TENNIS UNISEX

- Maximum calf suction.
- Less metatarsal irritation.
- Protects displacements in the impacts.

NRG CALF GUARD UNISEX

- Recommended for triathlon and duathlon.
- Concentrates muscle power.
- To be used with taping.

NRG ARM SLEEVE UNISEX

- Less forearm vibrations.
- Better strength power transmission due to the segment's stiffness.

RECUT TIGH UNISEX

- To recover after practicing sport.
- Normalizes the calf and quadriceps volume.
- Minimizes muscle soreness.

RECUSOCK UNISEX

- To recover after practicing sport.
- Muscle overloads recovery.
- Uniform compression that massages the calf.

RLX SOCK UNISEX

- Gives relaxation after any sports practice.
- Recommended for sports trips.

BLUELINE UNISEX

NRG JUNIOR SPECIAL/SIZE
